Madam, Sir,

Currently a 3rd year student at the CESI engineering school located in the city of Reims in France, I am contacting you to request an internship in your company as part of my international internship. Indeed, as part of the validation of my computer engineering degree, I have to do for my 4th year, an internship abroad and I am looking for a company that could welcome me in its IT department.

My international internship should last between **4 and 6 months** and should allow me to participate in an **IT project** while practicing the **English language** to improve myself but also discover ways of working in other countries.

After receiving my graduation diploma, I continued in higher education with a higher national diploma followed by a professional license with work-study training in a French company. This allowed me to have a diploma of level +3 and I decided to continue my studies no to remain a computer technician but to become an engineer in computer science.

My skills are mainly focused on web and mobile application programming and database management due to the many web projects I have done in a company in France. I also master programming languages like Java, JavaScript, PHP, SQL, Python and have already become familiar with several Frameworks like jQuery, Angular and especially React. I am open to any project concerning IT even if the one of these internships is not on a web application because it will allow me to discover more about IT. I would like later to become head of an IT department in order to carry out exciting IT projects and I think that this internship in your company can help me because **[...]**.

I hope to have the chance to work in your company and in this beautiful country of **[Germany].**

Clément BONJOUR
